

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

expected: would have been *Streaming*: But in less than an Hour, the Clouds (which had been pretty still) began to move to the *S. W.* and at last obscured the whole Hemisphere; which before was all clear enough (except towards the *North*) to shew the Stars, although bespread with Vapours, like a thin Fog, a little inclining to red.

This Relation I thought it convenient to give you, and the Illustrious Society, because it may assist such as are wiser than my self to discover the Nature of this difficult *Phænomenon*.

Your much obliged

Humble Servant,

W. DERHAM.

II. *A remarkable Conformation of the Urinary Parts, communicated in a Letter to the Same, by Mr. John Budgen.*

I Am advised to communicate to you a very uncommon Case, which I met with in my Country Practice, and is as follows.

In *Villâ Com' Surriæ*, *Ockley* vulgò dictâ, anno 1711 nata est Infantula, cujus in Tergo, circa vertebra inferiores, apparuit Tumor indolens, cutis coloris,

rem, Oviq; columbini majusculi magnitudinem referens, qui cum Puellâ tantoperè concrevit, ut circiter nonum, vel decimum ætatis annum, ubi primùm conspexi, Vesicam vitulinam, aëre distentam, sed sine Cervice, planè repræsentaverit. Anno præsentis (*viz.* 1728.) Vesicæ bubulinæ magnitudinem æquabat. Die 29 Jan. proxime elapso in Lecto jacenti disruptus est hic Tumor, a quo multum Liquoris, instar Urinæ profluebat. Re perspectâ, invenimus Tunicas (& interiùs Materiam mucosam) Ureteres; Venas, & Arterias, tales omninò, quales Vesica habere consuevit: nec defuit commercium quoddam cum Partibus internis per foramen in vertebriis Digitum hominis minorem in Abdomen admittens, quod Vasa memorata recipiebat. 2^o Die Feb. 1728, horam circiter decimam nocturnam obiit Puella; & si Cadaver aperire per Parentes, huic Rei strenuè reclamantes, licuisset, credor quidè in Abdomine, Vesicæ Cervicem, & nullam aliam Vesicam inveniremus; non enim post ruptum Tumorem vel semel minxerat.

Dat. 3^o Die Feb. 1728.

I hope you'll be pleased to take this in good Part,
from,

*Darking, Ap. 18,
in Surry, 1729.*

S I R, your very

humble Servant,

JOHN BUDGEN.
